

Infinite possibilities

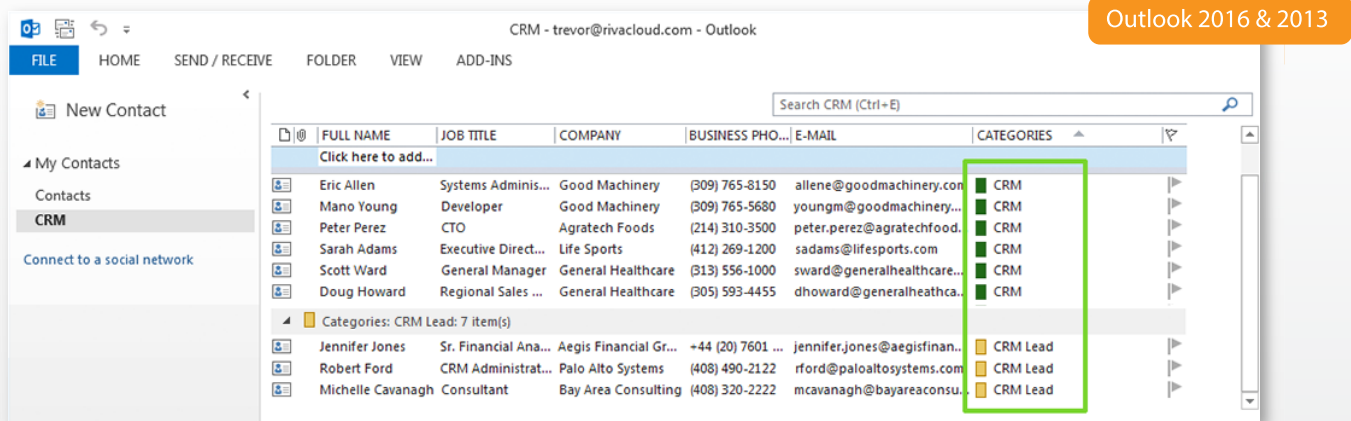

Riva delivers CRM data automation for the world's best CRMs,
email collaboration systems, mobile devices,
and other business applications

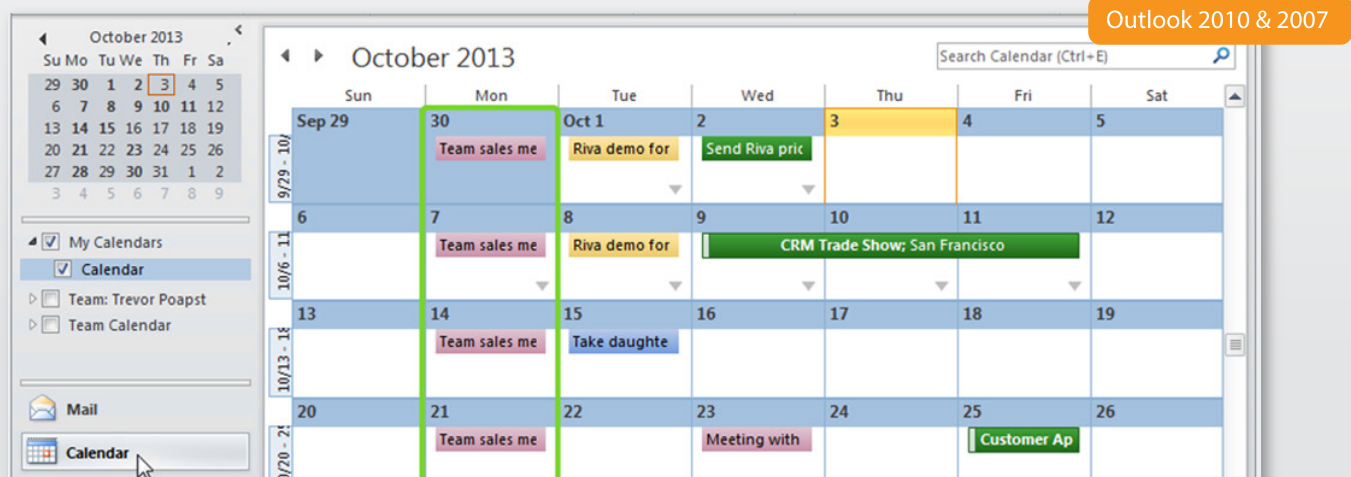

Automatically sync data between CRM, email, and other systems

Riva connects a dozen of the world's best CRMs to Office 365, Exchange, Gmail and G Suite, IBM Collaboration Solutions, GroupWise, Marketo, mobile devices, and other business applications.

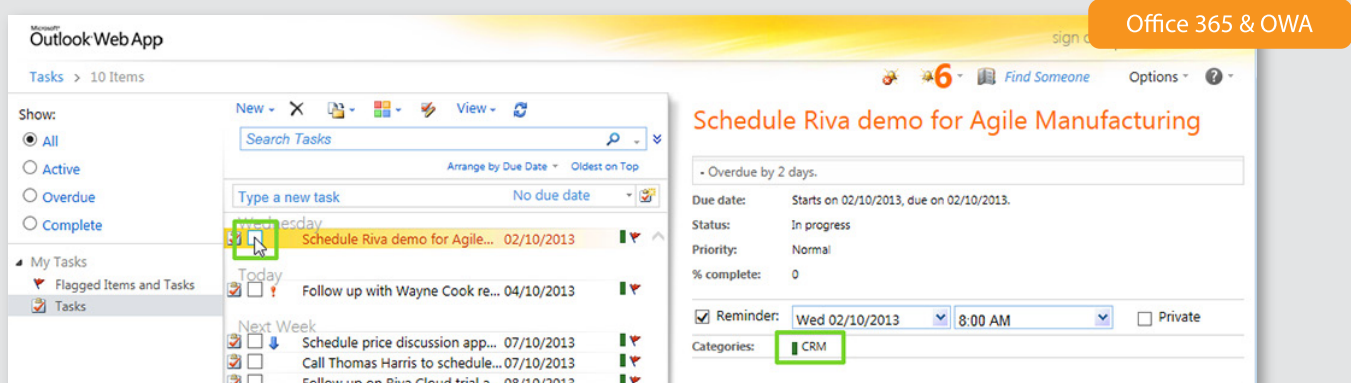

Riva significantly improves sales productivity and CRM user adoption by syncing data reliably across desktop, web, and mobile applications. Plus, Riva introduces powerful relationship intelligence and data automation features that can take your team's sales performance to the next level.

Contact integration. Automatically sync contacts between your CRM, email system, and mobile devices. Advanced contact sync filters enable you to sync only those contacts that are relevant to you or your team.

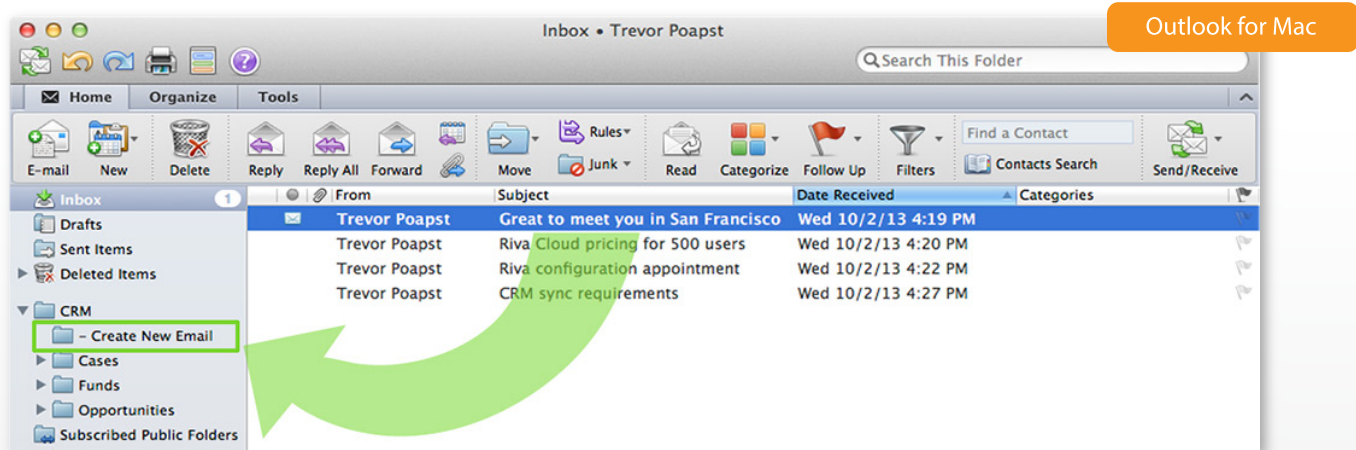

Calendar integration. Seamlessly sync calendar events between your CRM, email system, and mobile devices. Sync appointments, recurring events, private events, multi-day events, event categories, and more!

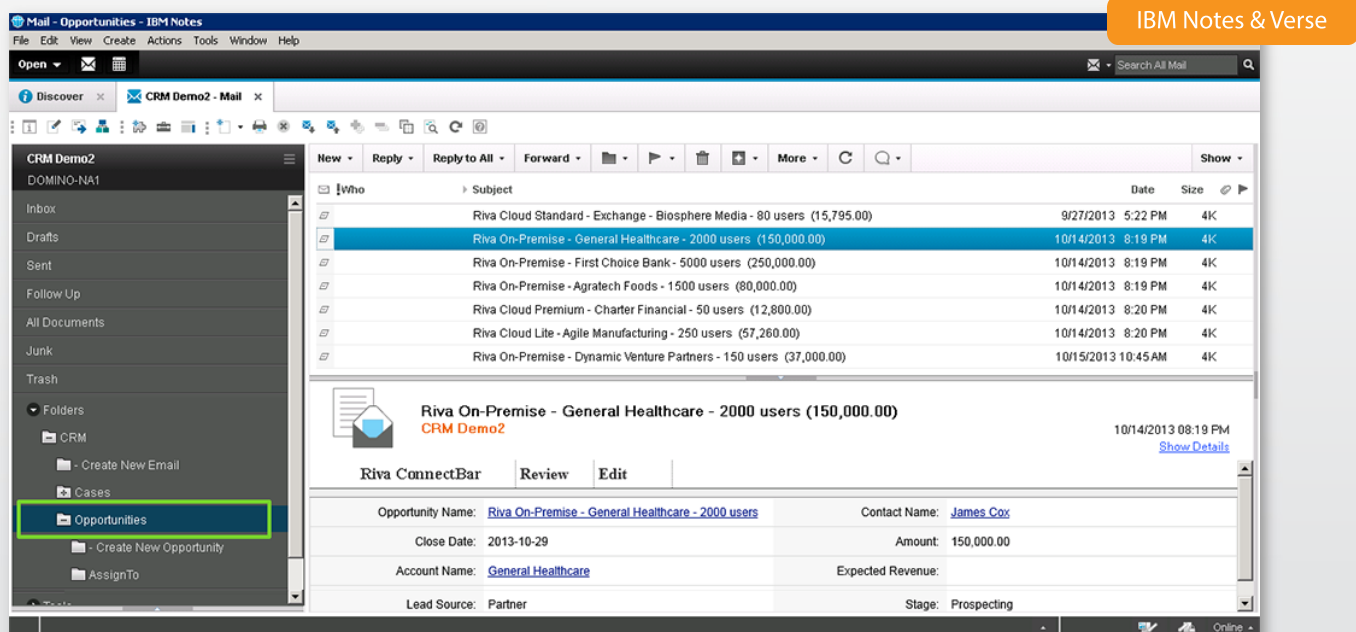

Task integration. Take personal and team productivity to the next level by creating and managing tasks in your CRM, email application of choice, and mobile device. Riva automatically keeps everything in sync!

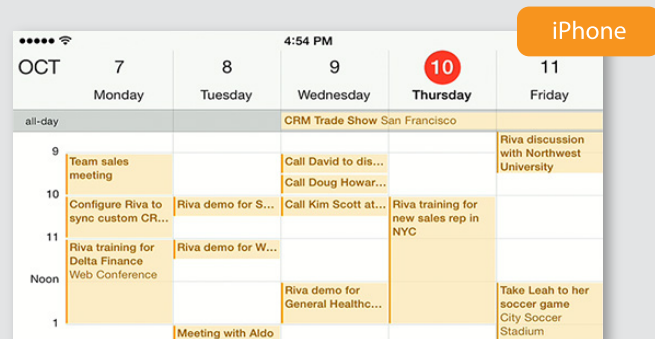

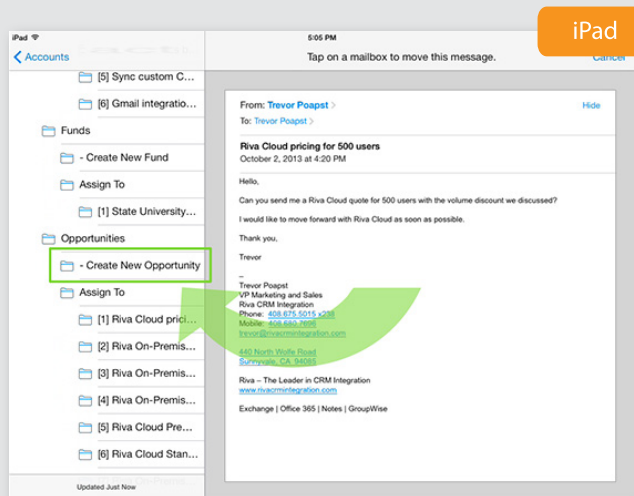

Advanced CRM data automation and relationship intelligence

Email integration. Track emails automatically or manually against CRM contacts, accounts, opportunities, cases, and custom objects. Riva can be configured to create accounts and contacts if they don't already exist in CRM.

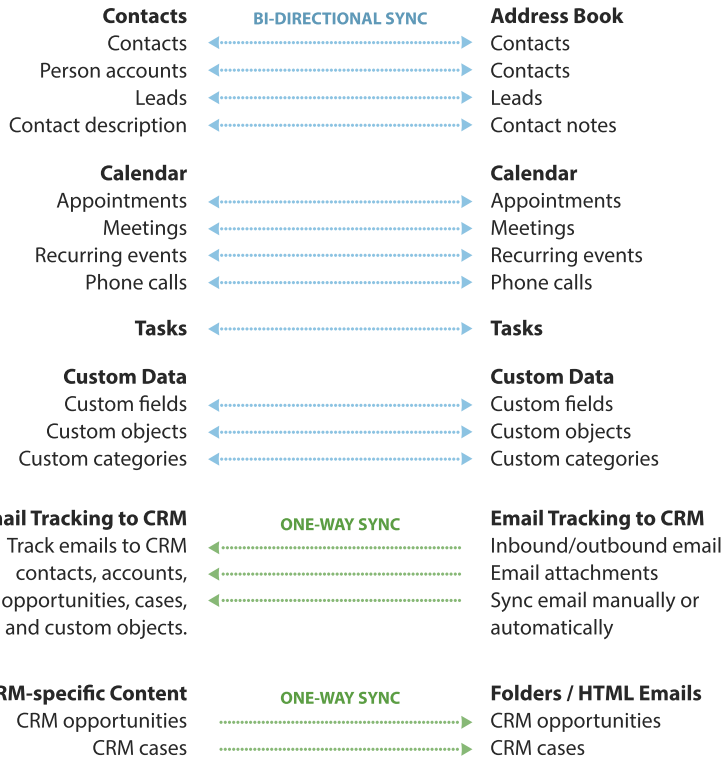

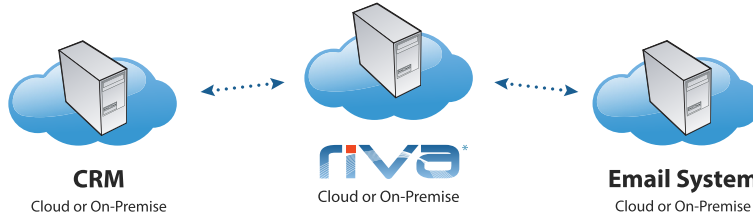

Opportunity, case, and custom object integration. View and manage CRM opportunities, cases, and custom objects directly from your email client and mobile devices. Riva displays CRM data as HTML emails and users can click SmartLinks to open the records in CRM.

View and manage CRM data on iOS and Android devices. Automatically sync data between your CRM and all leading mobile devices, including the latest iPhone, iPad, and Android devices. Users can access CRM data in online and offline modes and take advantage of automation features.

CRM data automation + relationship intelligence + AI
